

Capability

Mine closure is increasingly understood to be a whole of mine-life activity with the level of detail and resolution increasing as a mine operation matures. 360 Environmental has a keen understanding of the regulatory landscape as it applies to mining and our team members are experienced in site closure plans.

We have recently managed the preparation of a public environmental review (PER) for a major new mining project. A part of the PER we prepared a conceptual closure and rehabilitation strategy.

We have a multi-disciplinary team of environmental specialists and project managers. We also have cooperative arrangements with non-environmental specialists as required.

360 Environmental provides the following mine closure services:

- ✓ Closure project management;
- ✓ Closure management systems – documenting accountabilities, timelines and knowledge retention strategies;
- ✓ Plant and infrastructure decommissioning and asset disposal;
- ✓ Rehabilitation - documentation, completion criteria, waste management and containment, permanent stable slopes, ecosystem reconstruction, research;
- ✓ Stakeholder engagement – is a critical element for orderly closure including local communities, government, NGOs and traditional owners. We facilitate two way communication to understand stakeholder preferences and to manage expectations;
- ✓ Risk appreciation – identifying, rating and documenting closure risks leading to risk minimisation solutions; and
- ✓ Financial provision – detailed closure cost estimates for informed decision making.
